CUBIC DESIGNS INTRODUCES NEW TRACK GUARD FOR OVERHEAD DOORS

New Berlin, WI . . . Cubic Designs is currently introducing the Cubic Track Guard – a heavy-duty structural steel guard designed to protect overhead door tracks and save track repair costs. The unit is built to absorb the impact of a forklift or other in-plant vehicle.

Track Guard prevents damage to overhead door tracks and resulting door operation problems caused by forklift impacts. It provides maximum door track protection without interfering with normal door operation. Track Guard anchors to the interior building floor for easy installation. Its heavy-duty, low profile design wraps around the door track to protect against front and side forklift impacts. Track Guard is more durable and cost effective when compared to conventional pipes and embedded concrete bollards. It is also easier to replace if damaged by a forklift. Standard Track Guard height is 36". Custom heights and optional wall mount designs are available upon request.

Cubic Track Guard is protected with an attractive, durable, powder coat finish available in 14 colors. Standard yellow is offered for immediate shipment (within 48 hours or less of approved order). Custom colors and finishes also available upon request.

Cubic Designs, Inc manufactures a full line of industrial safety products designed to provide total plant protection. The company offers heavy-duty Safety Rail, Rack Guards, Track Guards, Handrail Systems, Safety Gates, Bollards, Rack Aisle Guards, Ladders & Cages and Code Approved Stairways.
